

User's Manual

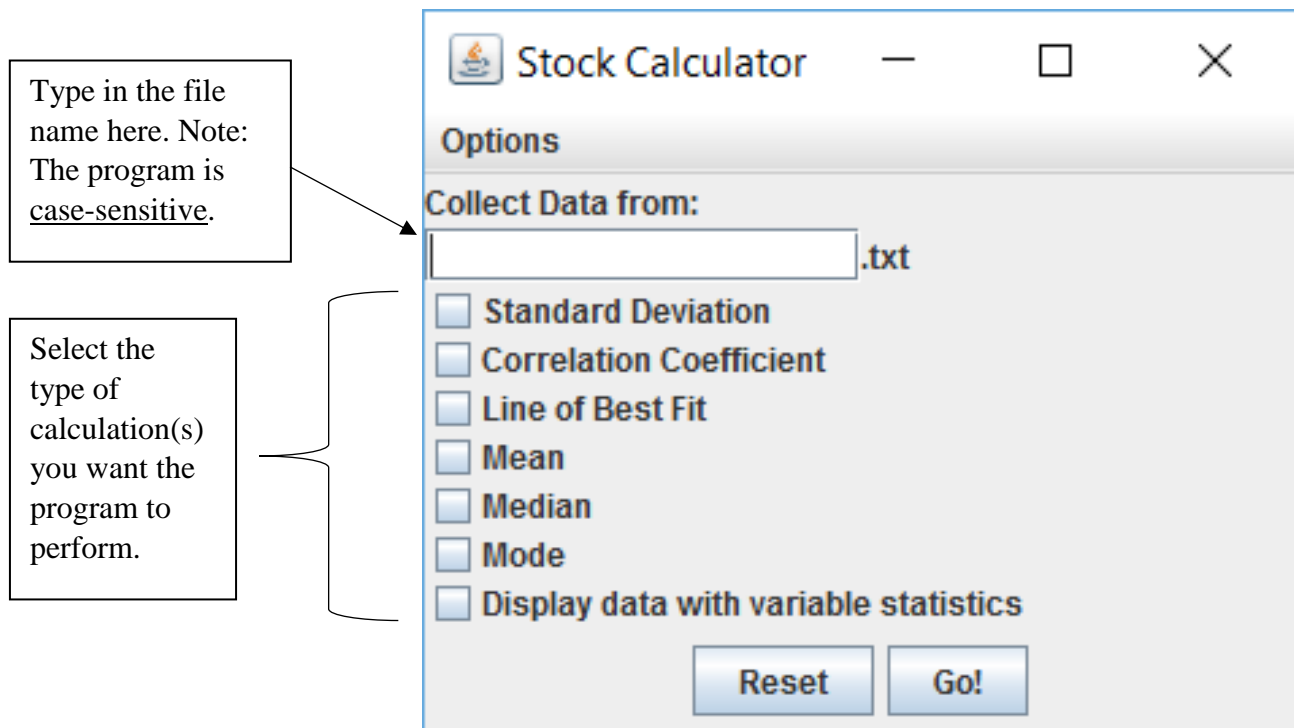

Figure 1: The interface of the Stock Calculator

Use the **Reset** button to refresh the program. Use the **Go!** button to get the analysis file.

Use the **Options** Menu to access the “Help” and “Calculations” option. The Help option will help with any sort of error you get. The Calculations option will give you a description of each calculation.

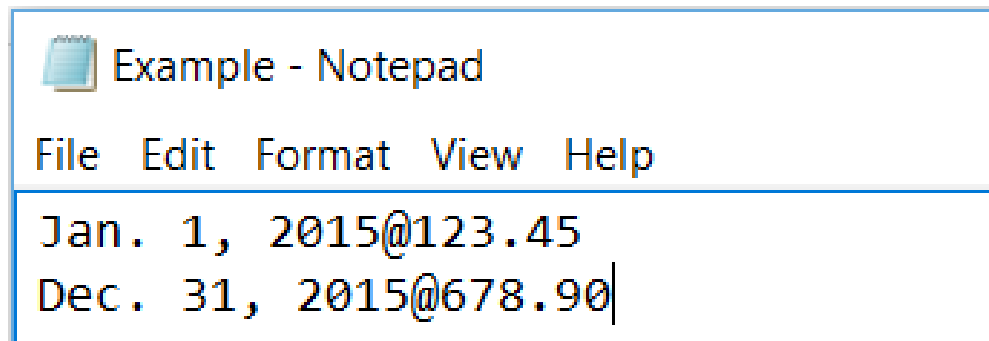

Figure 2: Sample input format in the txt file

Make sure to separate the date with the stock prices with a “@” symbol. The date can be formatted any way you want. Only put the numerical value of the cost prices (ie. No “\$” in front of the price or any unnecessary characters.”)

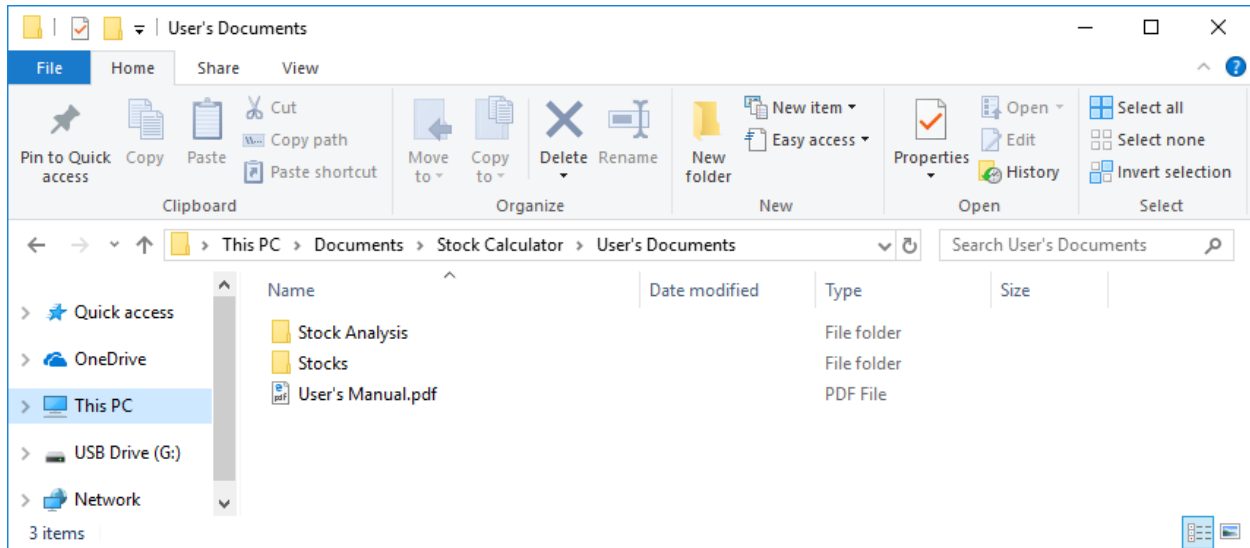

Figure 3: File Directory of the User's Document Folder

**** DO NOT DELETE NOR RENAME ANY OF THE FOLDERS AND FILES IN THE APPLICATION! ****

The **Stock Analysis** folder is where created files will be placed after performing calculations.

The **Stocks** folder is where all the stock prices txt files that are going to be or have been analyzed all located; essentially the user's input folder. (Refer to Figure 2 for formatting of the file.)
